SENIOR / STAFF ENGINEER · ENG. MANAGER · REMOTE

RELIABLE BY DESIGN.

I'm Keith Huster, Senior Software Engineer II and former Team Lead II on Olo's Software Infrastructure team. For 15+ years I've architected and operated distributed .NET platforms: billions of transactions a year at better than 99.9% availability, a platform-wide move to Kubernetes and modern CI/CD, and shared libraries used by 100+ engineers. I've led the systems and the team that runs them, and I'm looking for a Staff engineering or engineering management role where reliability is the product.

01 · EXPERIENCE

FROM MEDICAL DEVICES TO CLOUD PLATFORMS

Electrical engineer by training, platform engineer by trade. Twenty-four years across medical devices, EdTech, FinTech and restaurant-platform infrastructure, the last eight at Olo, all of it shipping systems other people depend on.

2002 – 2014 · SUNMAN, IN

HILL-ROM

Software Engineering Specialist. Embedded firmware, TCP/IP gateways and hospital-bed electronics for the VersaCare and TotalCare lines. Two-time Patent of the Year.

2014 – 2018 · REMOTE

CURRICULUM LOFT, THEN CONFLUENCE

The turn to the web. Full-stack EduTech and FinTech applications in ASP.NET MVC, C#, React, Relay and GraphQL, plus production support.

2018 – 2021 · REMOTE

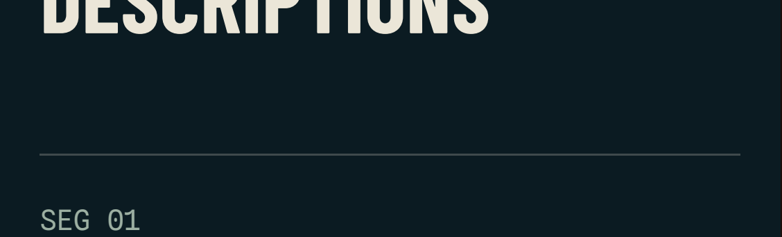
OLO · MENU TEAM

Senior Software Engineer II. Menu pricing tools used by tens of thousands of restaurant managers, and the Menu Import Service carved out of the monolith.

2021 – NOW · REMOTE

OLO · SOFTWARE INFRASTRUCTURE

Senior Software Engineer II, then Team Lead II (2024 to 2025) for a six-engineer team, now back on the Staff track: reliability, Kubernetes, CI/CD and cross-team RFCs.



02 · IMPACT

RESULTS, NOT JOB DESCRIPTIONS

SEG 01

FIVE CORE SERVICES MOVED TO KUBERNETES

Initiated and led the migration of five core services from EC2 to Amazon EKS, introducing HPA and KEDA autoscaling so peak traffic scales out automatically instead of paging an engineer.

5 core services migrated

SEG 02

CI/CD HANDED BACK TO THE TEAMS

Migrated approximately ten services and libraries from centralized TeamCity to GitHub Actions, removing a delivery bottleneck so each team owns and ships its own pipeline.

~10 pipelines decentralized

SEG 03

$12K A MONTH OFF THE AWS BILL

Led a system-optimization initiative for the Payload Logging service that reduced AWS S3 upload costs by more than $12K per month while preserving the data incident responders rely on.

$12K+ saved every month

SEG 04

MENU INGESTION DECOUPLED FROM THE MONOLITH

Designed and built the Menu Import Service, a service-oriented extraction from Olo's legacy monolith, plus POS and brand integrations for Panda Express, Denny's and others.

10,000s of restaurant managers served

SEG 05

SAFER DEPLOYS, FASTER RECOVERY

Introduced LaunchDarkly feature flags and centralized configuration in Consul across core services, raising deployment success rates and cutting incident MTTR.

Lower MTTR safer deploys, faster recovery

03 · LEADERSHIP

SIX ENGINEERS. EIGHTEEN MONTHS. ZERO HIGH-SEVERITY INCIDENTS.

From April 2024 to September 2025 I managed Olo's six-engineer Software Infrastructure team as Team Lead II without leaving the code. I hired and onboarded two engineers, ran planning and one-on-ones, and when senior leadership mandated 24/7 coverage I designed the team's first L2 on-call practice as a weekly rotation calibrated for engineer well-being. The team sustained greater than 99.9% availability with zero high-severity production incidents in that time.

I've mentored more than 20 engineers over my career, and I set technical direction through RFCs and design reviews rather than mandates; the shared libraries I own are relied on by 100+ engineers across nearly every team at Olo. I'm equally effective as a Staff-level IC or as the manager clearing the path for the team.

04 · PATENTS

US PATENTS, MOST AS LEAD OR SOLE INVENTOR

Before cloud platforms I spent twelve years (2002 to 2014) in new product development at Hill-Rom, designing electronics, embedded firmware and network gateways for hospital beds and helping take ten products to market. That work produced 36 US patents, most as lead or sole inventor, two Patent of the Year awards and the President's Innovation Award, and a lasting standard for what "production-ready" means when patients depend on it.

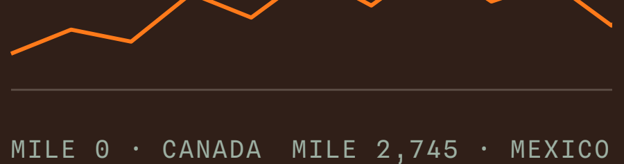
05 · BEYOND WORK

WHY I FINISH WHAT I START

BANFF, AB → ANTELOPE WELLS, NM · 2025

TOUR DIVIDE FINISHER

2,745 miles along the Continental Divide, self-supported, in 27 days: roughly a hundred miles a day of planning, troubleshooting and pacing with nobody to hand the problem to. It's the same discipline I bring to a multi-quarter migration or a 3 a.m. incident.



2004 – 2016

VOLUNTEER FIREFIGHTER, LIEUTENANT

Twelve years on the department, promoted to Lieutenant. Calm, clear communication under pressure is a skill I learned long before my first production incident.
